

# Water Quality Monitoring Program

### **About the Program**

- Part of Maine DEP Volunteer River Monitoring Program
- 14 years of data collected, now beginning year 15 of the program, and 7<sup>th</sup> year
  by Presumpscot Regional Land Trust
  - Results based on 10 sample events from May September
  - Average of 30 volunteers collecting data
  - Data collection and analysis focused on bacteria and dissolved oxygen

# Water Quality in the Presumpscot: 2022 Dissolved Oxygen Results

## Water Quality in the Presumpscot: 2022 Bacteria Results

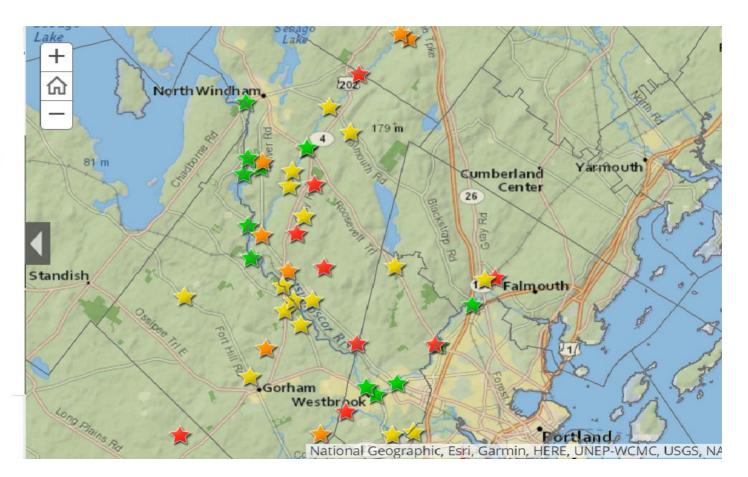

2022: Samples Meeting Bacteria Standard

**100%** 

**?** 70-99%

50-69%

<50%

### 2022 Annual Data Takeaways

The "main stem" of the Presumpscot River almost always met dissolved oxygen and bacteria standards.

- In the 11 **Presumpscot River tributaries**, dissolved oxygen results were extremely variable and bacteria results were generally improved from 2021.
  - Sites on the **Stroudwater River** mostly met both bacteria and dissolved oxygen state standards about half of the time

# Water Quality Trends in the Presumpscot: 14-year Dissolved Oxygen Results

Declining

### **Historical Data Takeaways**

- The main stem of the Presumpscot River continues to almost always meet both bacteria and dissolved oxygen state standards.
- Most **tributaries of the Presumpscot** have historically met dissolved oxygen standards most of the time and have rarely met bacteria state standards.
  - More data is needed on the Stroudwater River to assess averages and trends.

### **Thank You**

Thank you to Casco Bay Estuary Partnership, the Town of Windham, and community volunteers for supporting this work.

Please see <u>www.prlt.org/water</u> to view data maps and background information about the Program.
